BOXERIZE

INSTRUCTIONS FOR UPLOADING
YOUR PRINT FILE

**Would you like to create a custom print for your packaging
by adding unique images, logos or text?**
If you already have a complete graphic design ready to print on your
custom box, there are certain requirements that your file must meet
to ensure optimal printing:
- the file should preferably be created using
the **Illustrator** graphics programme;
- fonts must be converted to **tracings**;
- **images** and **logos** must be embedded;
- if you use graphics programmes such as **Photoshop** or **InDesign**,
the files must be in **300 DPI.**

**Not sure what graphic to print on your packaging yet
and want it to be absolutely perfect?**
If you haven't designed your graphic yet, you can request
a die-cut layout of the box from our team to help you understand
its details and structure better. Alternatively, contact us to arrange
a **personalised consultation** and create your packaging with us.
